

ROAD PRINT TRAILER 2

The new way of doing
road markings

If you want to know more email us at info@luno.se

The RPT 2 (Road print trailer 2) is a machine developed in accordance with modern regulations for printing road markings using thermoplastic paint. Since it is a hazardous environment working with symbol making, the RPT 2 has been developed for ensuring personnel safety while working. And it only requires one operator to manage, and the operator **never needs to leave the cabin.**

The trailer works faster than traditionally methods of road marking. The RPT 2 prints symbols, lines, and hatched areas. The trailer follows all of the restrictions of a common trailer and can be registered as one allowing it to transport at 80 km/h therefore the trailer can move fast between working areas. There is also a large symbol library included from the start and new symbols is easily added if needed.

When operating the RPT 2 the operator is helped by the aiming camera, and the trailers steering system makes it easy to maneuver.

It can print new symbols or just a partial symbol for repairs. When printing a symbol you can easily keep track of the print in the result camera.

Advantages of the road print trailer 2

- Works faster than traditionally methods
- More accurate results
- More consistent result
- Safer working environment
- High maneuverability
- Low maintenance
- One operator
- CE approved
- Repair and complementing old symbols
- Cost efficient
- Joint symbol are possible
- GPS functionality prepared

Functions of the road print trailer 2

- Symbol and lines printing
- Printing hatched areas
- Helped gyro assisted steering when printing new symbols
